Life Insurance Options After Retirement

Life insurance can serve many valuable purposes during your life. However, once you've retired, you may no longer feel the need to keep your life insurance, or the cost of maintaining the policy may have become too expensive. In these cases, you might be tempted to abandon the policy or surrender your life insurance coverage. But there are other alternatives to consider as well.

Lapse or surrender

If you have term life insurance, you generally will receive nothing in return if you surrender the policy or let it lapse by not paying premiums. On the other hand, if you own permanent life insurance, the policy may have a cash surrender value (CSV), which you can receive upon surrendering the insurance. If you surrender your cash value life insurance policy, any gain (generally, the excess of your CSV over the cumulative amount of premium paid) resulting from the surrender will be subject to federal (and possibly state) income tax. Also, surrendering your policy prematurely may result in surrender charges, which can reduce your CSV.

Exchange the old policy

Another option is to exchange your existing life insurance policy for either a new life insurance policy or another type of insurance product. The federal tax code allows you to exchange one life insurance policy for another life insurance policy, an endowment policy, an annuity, or a qualified long-term care policy without triggering current tax liability. This is known as an IRC Section 1035 exchange. You must follow IRS rules when making the exchange, particularly the requirement that the exchange must be made directly between the insurance company that issued the old policy and the company issuing the new policy or contract. Also, the rules governing 1035 exchanges are complex, and you may incur surrender charges from your current life insurance policy. In addition, you may be subject to new sales, mortality, expense, and surrender charges for the new policy, which can be very substantial and may last for many years afterward.

Lower the premium

If the premium cost of your current life insurance policy is an issue, you may be able to reduce the death benefit, lowering the premium cost in the process. Or you can try to exchange your current policy for a policy with a lower premium cost. But you may not qualify for a new policy because of your age, health problems, or other reasons.

Stream of income

You may be able to exchange the CSV of a permanent life insurance policy for an immediate annuity, which can provide a stream of income for a predetermined period of time or for the rest of your life. Each annuity payment will be apportioned between taxable gain and nontaxable return of capital. You should be aware that by exchanging the CSV for an annuity, you will be giving up the death benefit, and annuity contracts generally have fees and expenses, limitations, exclusions, and termination provisions. Also, any annuity guarantees are contingent on the claims-paying ability and financial strength of the issuing insurance company.

Long-term care

Another potential option is to exchange your life insurance policy for a tax-qualified long-term care insurance (LTCI) policy, provided that the exchange meets IRC Section 1035 requirements. Any taxable gain in the CSV is deferred in the long-term care policy, and benefits paid from the tax-qualified LTCI policy are received tax free. But you may not be able to find a LTCI policy that accepts lump-sum premium payments, in which case you'd have to make several partial exchanges from the CSV of your existing life insurance policy to the long-term care policy provider to cover the annual premium cost.

A complete statement of coverage, including exclusions, exceptions, and limitations, is found only in the policy. It should be noted that carriers have the discretion to raise their rates and remove their products from the marketplace.

Be Prepared to Retire in a Volatile Market

Market losses on the front end of your retirement could have an outsized effect on the income you might receive from your portfolio.

In an ideal world, your retirement would be timed perfectly. You would be ready to leave the workforce, your debt would be paid off, and your nest egg would be large enough to provide a comfortable retirement--with some left over to leave a legacy for your heirs.

Unfortunately, this is not a perfect world, and events can take you by surprise. In a survey conducted by the Employee Benefit Research Institute, only 44% of current retirees said they retired when they had planned; 46% retired earlier, many for reasons beyond their control.[1] But even if you retire on schedule and have other pieces of the retirement puzzle in place, you cannot predict the stock market. What if you retire during a market downturn?

Sequencing risk

The risk of experiencing poor investment performance at the wrong time is called sequencing risk or sequence of returns risk. All investments are subject to market fluctuation, risk, and loss of principal--and you can expect the market to rise and fall throughout your retirement. However, market losses on the front end of your retirement could have an outsized effect on the income you might receive from your portfolio.

If the market drops sharply before your planned retirement date, you may have to decide between retiring with a smaller portfolio or working longer to rebuild your assets. If a big drop comes early in retirement, you may have to sell investments during the downswing, depleting assets more quickly than if you had waited and reducing your portfolio's potential to benefit when the market turns upward.

Dividing your portfolio

One strategy that may help address sequencing risk is to allocate your portfolio into three different buckets that reflect the needs, risk level, and growth potential of three retirement phases.

Short-term (first 2 to 3 years): Assets such as cash and cash alternatives that you could draw on regardless of market conditions.

Mid-term (3 to 10 years in the future): Mostly fixed-income securities that may have moderate growth potential with low or moderate volatility. You might also have some equities in this bucket.

Long-term (more than 10 years in the future): Primarily growth-oriented investments such as stocks that might be more volatile but have higher growth potential over the long term.

Throughout your retirement, you can periodically move assets from the long-term bucket to the other two buckets so you continue to have short-term and mid-term funds available. This enables you to take a more strategic approach in choosing appropriate times to buy or sell assets. Although you will always need assets in the short-term bucket, you can monitor performance in your mid-term and long-term buckets and shift assets based on changing circumstances and longer-term market cycles.

If this strategy appeals to you, consider restructuring your portfolio before you retire so you can choose appropriate times to adjust your investments.

Determining withdrawals

The three-part allocation strategy may help mitigate the effects of a down market by spreading risk over a longer period of time, but it does not help determine how much to withdraw from your savings each year. The amount you withdraw will directly affect how long your savings might last under any market conditions, but it is especially critical in volatile markets.

One common rule of thumb is the so-called 4% rule. According to this strategy, you initially withdraw 4% of your portfolio, increasing the amount annually to account for inflation. Some experts consider this approach to be too aggressive--you might withdraw less depending on your personal situation and market performance, or more if you receive large market gains.

Another strategy, sometimes called the endowment method, automatically adjusts for market performance. Like the 4% rule, the endowment method begins with an initial withdrawal of a fixed percentage, typically 3% to 5%. In subsequent years, the same fixed percentage is applied to the remaining assets, so the actual withdrawal amount may go up or down depending on previous withdrawals and market performance.

A modified endowment method applies a ceiling and/or a floor to the change in your withdrawal amount. You still base your withdrawals on a fixed percentage of the remaining assets, but you limit any increase or decrease from the prior year's withdrawal amount. This could help prevent you from withdrawing too much after a good market year, while maintaining a relatively steady income after a down market year.

Note: *Asset allocation is a method used to help manage investment risk; it does not guarantee a profit or protect against investment loss.*

Nearing Retirement? Time to Get Focused

A financial professional can help you estimate how much your retirement accounts may provide on a monthly basis. Your employer may also offer tools to help. Keep in mind, however, that neither working with a financial professional nor using employer-sponsored tools can guarantee financial success.

If you're within 10 years of retirement, you've probably spent some time thinking about this major life change. The transition to retirement can seem a bit daunting, even overwhelming. If you find yourself wondering where to begin, the following points may help you focus.

Reassess your living expenses

A step you will probably take several times between now and retirement--and maybe several more times thereafter--is thinking about how your living expenses could or should change. For example, while commuting and dry cleaning costs may decrease, other budget items such as travel and health care may rise. Try to estimate what your monthly expense budget will look like in the first few years after you stop working. And then continue to reassess this budget as your vision of retirement becomes reality.

Consider all your income sources

Next, review all your possible sources of income. Chances are you have an employer-sponsored retirement plan and maybe an IRA or two. Try to estimate how much they could provide on a monthly basis. If you are married, be sure to include your spouse's retirement accounts as well. If your employer provides a traditional pension plan, contact the plan administrator for an estimate of your monthly benefit amount.

Do you have rental income? Be sure to include that in your calculations. Is there a chance you may continue working in some capacity? Often retirees find that they are able to consult, turn a hobby into an income source, or work part-time. Such income can provide a valuable cushion that helps retirees postpone tapping their investment accounts, giving them more time to potentially grow.

Finally, don't forget Social Security. You can get an estimate of your retirement benefit at the Social Security Administration's website, ssa.gov. You can also sign up for a *my* Social Security account to view your online Social Security Statement, which contains a detailed record of your earnings and estimates of retirement, survivor, and disability benefits.

Manage taxes

As you think about your income strategy, also consider ways to help minimize taxes in retirement. Would it be better to tap taxable or tax-deferred accounts first? Would part-time work result in taxable Social Security benefits? What about state and local taxes? A qualified tax professional can help you develop an appropriate strategy.

Pay off debt, power up your savings

Once you have an idea of what your possible expenses and income look like, it's time to bring your attention back to the here and now. Draw up a plan to pay off debt and power up your retirement savings before you retire.

- **Why pay off debt?** Entering retirement debt-free--including paying off your mortgage--will put you in a position to modify your monthly expenses in retirement if the need arises. On the other hand, entering retirement with mortgage, loan, and credit card balances will put you at the mercy of those monthly payments. You'll have less of an opportunity to scale back your spending if necessary.
- **Why power up your savings?** In these final few years before retirement, you're likely to be earning the highest salary of your career. Why not save and invest as much as you can in your employer-sponsored retirement savings plan and/or your IRAs? Aim for the maximum allowable contributions. And remember, if you're 50 or older, you can take advantage of catch-up contributions, which allow you to contribute an additional $6,000 to your employer-sponsored plan and an extra $1,000 to your IRA in 2016.

Account for health care

Finally, health care should get special attention as you plan the transition to retirement. As you age, the portion of your budget consumed by health-related costs will likely increase. Although Medicare will cover a portion of your medical costs, you'll still have deductibles, copayments, and coinsurance. Unless you're prepared to pay for these costs out of pocket, you may want to purchase a supplemental insurance policy.

In 2015, the Employee Benefit Research Institute reported that the average 65-year-old married couple would need $213,000 in savings to have at least a 75% chance of meeting their insurance premiums and out-of-pocket health care costs in retirement. And that doesn't include the cost of long-term care, which Medicare does not cover and can vary substantially depending on where you live. For this reason, you might consider a long-term care insurance policy.

These are just some of the factors to consider as your prepare to transition into retirement. Breaking the bigger picture into smaller categories may help the process seem a little less daunting.

Should I pay off my student loans early or contribute to my workplace 401(k)?

For young adults with college debt, deciding whether to pay off student loans early or contribute to a 401(k) can be tough. It's a financial tug-of-war between digging out from debt today and saving for the future, both of which are very important goals. Unfortunately, this dilemma affects many people in the workplace today. According to a student debt report by The Institute for College Access and Success, nearly 70% of college grads in the class of 2014 had student debt, and their average debt was nearly $29,000. This equates to a monthly payment of $294, assuming a 4% interest rate and a standard 10-year repayment term.

Let's assume you have a $300 monthly student loan payment. You have to pay it each month--that's non-negotiable. But should you pay more toward your loans each month to pay them off faster? Or should you contribute any extra funds to your 401(k)? The answer boils down to how your money can best be put to work for you.

The first question you should ask is whether your employer offers a 401(k) match. If yes, you shouldn't leave this free money on the table. For example, let's assume your employer matches $1 for every dollar you save in your 401(k), up to 6% of your pay. If you make $50,000 a year, 6% of your pay is $3,000. So at a minimum, you should consider contributing $3,000 per year to your 401(k)--or $250 per month--to get the full $3,000 match. That's potentially a 100% return on your investment.

Even if your employer doesn't offer a 401(k) match, it can still be a good idea to contribute to your 401(k). When you make extra payments on a specific debt, you are essentially earning a return equal to the interest rate on that debt. If the interest rate on your student loans is relatively low, the potential long-term returns earned on your 401(k) may outweigh the benefits of shaving a year or two off your student loans. In addition, young adults have time on their side when saving for retirement, so the long-term growth potential of even small investment amounts can make contributing to your 401(k) a smart financial move.

All investing involves risk, including the possible loss of principal, and there can be no guarantee that any investing strategy will be successful.

I have matured U.S. savings bonds. Are they still earning interest and, if not, can I roll them over to another savings bond?

Once U.S savings bonds have reached maturity, they stop earning interest. Prior to 2004, you could convert your Series E or EE savings bonds for Series HH bonds. This would have allowed you to continue earning tax-deferred interest. However, after August 31, 2004, the government discontinued the exchange of any form of savings bonds for HH bonds, so that option is no longer available.

Since matured savings bonds no longer earn interest, there is no financial benefit to holding on to them. If you have paper bonds, you can cash them in at most financial institutions, such as banks or credit unions. However, it's a good idea to call a specific institution before going there to be sure it will redeem your bonds. As an alternative, you can mail them to the Treasury Retail Securities Site, PO Box 214, Minneapolis, MN 55480, where they will be redeemed. If you have electronic bonds, log on to treasurydirect.gov and follow the directions there. The proceeds from your redeemed bonds can be deposited directly into your checking or savings account for a relatively quick turnover.

Another important reason to redeem your matured savings bonds may be because savings bond interest earnings, which can be deferred, are subject to federal income tax when the bond matures or is otherwise redeemed, whichever occurs first. So if you haven't previously reported savings bond interest earnings, you must do so when the bond matures, even if you don't redeem the bonds.

Using the money for higher education may keep you from paying federal income tax on your savings bond interest. The savings bond education tax exclusion permits qualified taxpayers to exclude from their gross income all or part of the interest paid upon the redemption of eligible Series EE and I bonds issued after 1989 when the bond owner pays qualified higher-education expenses at an eligible institution. However, there are very specific requirements that must be met in order to qualify, so consult with your tax professional.
